Replace skirmish.mix with your version or edit the ini.

add +multi to the shortcut from renegade  
start a dedicated server with that modpackage  
join it..

---

What do you mean +multi  
?

Go to C:\Westwood\RenegadeFDS\Server\ and find Renegadeserver.exe

Right click it, and click "Make Shortcut"

After that, Right click the shortcut and in tab "Shortcut" You should see a line called "Target: "C:\bla poopoo\lol\d00d"

Add +milti to the end of the C:\bla thing, Click Apply and okay and done.

Here's an example; C:\Westwood\RenegadeFDS\Server\RenegadeServer.exe +multi

by the way, you also may want to openup the hosts file:

c:\windows\system32\drivers\etc\hosts

in notepad and add a line like this:

127.0.0.1 master.gamespy.com

This will stop the FDS from trying to get a response from gamespy before actually starting the FDS in LAN mode..  
Something that bugged me in the past lol..

If you dont do this the FDS will 'hang' for a minute or so before it actually starts up >.<

Okay I don't have the Renegadeserver.exe in my folder?

And, I changed the WOL part to LAN, no change.

Please HELP!

Do it the easy way -> install the loopback network adapter driver that comes with Windows. Can't remember where exactly it is located, but you could search on the internet (when you're at whatever place you access it from).
