Which way do you see this girl spinning? Most people see her spinning clockwise. If you look at it the right way, you can also see her spinning counter-clockwise.

Some people have trouble and need to look at it for a couple of minutes. Others have to look away for a moment to "reset" their brain before they can switch directions.

For me the trick was to watch the legs and foot where it crosses the other, and mentally force myself to realize it could be going the other direction...then I see her spinning counter-clockwise until I force myself to change perspective again. Looking at her feet and shadow helps too.

P.S. Yes, the sillouette has nipples, that's not where you are supposed to be looking

I have a sneaky suspicion that it does spin both ways but changes in time....I'm not 100% sure, but after about 2-3 minutes I did relise she was spinning counter clock wise. About the changing direction thing, I could easily check in photoshop.

well after looking at it in photoshop....I really have to say it may be that she flips her direction at

some point, because looking at several areas and frames...the leg that's in the air is different sometimes, sometimes right and sometimes left. I dunno, but it looks very very odd, watching it now for several minutes it's like she switches back and forth.

EDIT: looking even even further frame by frame, I figured it out, she DOESNT spin at all! She does a 180 turn from left to right, then stops 1 frame and rewinds herself, she only travels 180 degrees and NEVER makes a 360 degree spin at all, that is why you sometimes feel she is not really spinning counter clockwise but clockwise, you trick your brain into continuing that she is in one direction, but really frame by frame shows the proof.

Heh no, the animation does not switch by itself. With a little practice you can change your perspective at will and see her spinning one direction and then the next whenever you want, although it does seem to be more difficult to switch "back" once you see the new direction

[View Forum Message](#) <> [Reply to Message](#)

I see her spinning clockwise only. No matter how i move my eyes or mind she doesn't change direction.

Maybe it's because my subconscious and conscience are connected more than other peoples (i can see an focus on more than one thing at once)... Or due to my autism. It's boring looking at a silhouette spinning round and round and round and round and round *fades* and round and round and round.

I can only see her going clockwise. Sure maybe if you look at only her foot but I'm afraid my eyes lack zoom capability. I can see her ponytail and breasts and tell which direction they are spinning in and thus her whole body is spinning the same way. Clockwise.

With a little practice you can change your perspective at will and see her spinning one direction and then the next whenever you want, although it does seem to be more difficult to switch "back" once you see the new direction

Well sorry to say, but the frames show that she goes left, half way, then turns right half way, then it repeats itself, look in the frames if you want to see for yourself, I looked at it for 5-10 minutes straight playing it through then looking at each frame (about 30 frames in this picture)

The reason you guys think she does a 360 degree turn is because she switches direction at a point where it is hard to see really what direction she is going.

[View Forum Message](#) <> [Reply to Message](#)

I thought i'd be a real clever arse and post an image of it played backwards saying "I can see it just fine...". But even with the animation playing backwards I see the bitch going clockwise.

I literally went frame by frame for six frames going foward, thinking OK, she is deffinatly going clockwise. The I went through those same six frames backwards, and the bitch was still going clockwise.

What the hell is happenening to my brain?

[View Forum Message](#) <> [Reply to Message](#)

Same as EWD here really. I tried to figure out what way she "really" turns in, if there is one, but I can't figure it out. I assume it depends on where you think the horizon is... If it would be below her feet, you would see her spinning CCW, but normally it would be CW. However due to the fact that she goes up and down as well, it is a bit more complex...

[View Forum Message](#) <> [Reply to Message](#)

I have a feeling it has to do with the lightning.
You can't really place it, and that's the reason you can't determine the way she turns, the reflection is plausible with both directions.

Subject: Re: OT: Optical Illusion - Spinning Girl
Posted by [StealthEye](#) on Thu, 28 Jun 2007 17:33:25 GMT
[View Forum Message](#) <> [Reply to Message](#)

She is 100% black, so you can't see what's in front and what is behind. You don't know whether she is facing you, or facing backwards. The perspective should give you a clue on which side she faces, however due to the up/down movement it is hard to determine that exactly.

[View Forum Message](#) <> [Reply to Message](#)

RoShamBo wrote on Thu, 28 June 2007 14:44The girl does half a turn one way, then half another.

Frames 1 to 15 she does a 180 left, 16-30 she does a 160 right...never a 360 full spin, it plays so fast it is almost as if she does spin, playing it at 2 fps shows that she does this.

Subject: Re: OT: Optical Illusion - Spinning Girl
Posted by [StealthEye](#) on Thu, 28 Jun 2007 20:27:40 GMT

Just look both the shadow and the foot at the same time when she goes clockwise, her leg goes north-west to north-east and back again.

Yeah, definetly have it now,

- 1) starts with her foot down and her other foot north-west.
 - 2) her foot rases and her other foot spins to north-east.
 - 3) her foot lowers and her other foot spins to north-west.
-

[View Forum Message](#) <> [Reply to Message](#)

I can see her going both ways now. But each time I see it, I can't possibly see how she goes anyother way. I cannot "make" her go either way, it just happens. Although it is easier to switch if I scroll so I can only see her feet.

[View Forum Message](#) <> [Reply to Message](#)

RoShamBo, reply to what I said... Which leg is in the middle, which is the moving one? If she makes 180 degree rotations, then it would mean the legs switch each time. However they don't, so she rotates.

Whether she rotates left or right really depends on which leg you think is the right leg, and which one is the left leg. Switch them, and she rotates in the opposite direction.

Subject: Re: OT: Optical Illusion - Spinning Girl
Posted by [jnz](#) on Thu, 28 Jun 2007 21:10:04 GMT

[View Forum Message](#) <> [Reply to Message](#)

It doesn't need to rotate because both legs are the same colour. You can't tell weather it has passed it or gone behind it. You'll see on the slow-mo that they both fit into each other perfectly.

[View Forum Message](#) <> [Reply to Message](#)

Yes, but that is not correct. Look at the slowmotion picture, but keep in mind which leg is the right leg. If you say it's the moving leg, then notice how after the 180 degree turn, it becomes the left leg! Apparently, she rotates in complete circles, because then the legs will be the same. Whether it's the left or right leg that is in the middle or that is moving determines the direction in which she is rotating. If you think she rotates clockwise, the left leg is in the middle. Counterclockwise: the right is in the middle.

You all think she spins because she actually changes her direction and rewinds in a angle that makes it seem 360 degree rotation has occurred/is occurring, but that is because it is black, you think first handed that she really is spinning in a full 360 degree circle.

I kept trying to see her spinning clockwise the way TC said it... Then I tried Reborn's method and I can't get her spinning cw again .

Subject: WTF X 2

Posted by [PlayMp1](#) on Mon, 02 Jul 2007 12:24:33 GMT

[View Forum Message](#) <> [Reply to Message](#)

Ok, she is definitely *not* spinning 360. Look at the slow motion one, She goes around to 240 then she switches back to 90. No going from 240 to 360, just 240, skip, 90.

Subject: Re: OT: Optical Illusion - Spinning Girl

Posted by [StealthEye](#) on Mon, 02 Jul 2007 13:56:09 GMT

[View Forum Message](#) <> [Reply to Message](#)

lol, that would cause her to do some funny dance... She definitely does NOT do a 240 degree turn. She's turning 360 degrees, and can not change directions when she's turning, however you don't know which way she's turning into. She never changes direction, because that would mean the other leg would be in the middle.

Subject: Re: OT: Optical Illusion - Spinning Girl

Posted by [cheesesoda](#) on Mon, 02 Jul 2007 15:46:52 GMT

[View Forum Message](#) <> [Reply to Message](#)

She definitely turns 360 degrees. It's just that she's a silhouette. You can't see any features, and you don't know if you're looking at her angled leg behind or in front of her standing leg. There's no depth, so it's impossible to tell a definite way in which she's going.
