when i turn on ren and i go to online play, the whole server screen is blank! no servers at all, and i mad because i have all the renegade modding tools on that computer and for some reason online play used to work. i have another computer that plays ren online fine but i dont want to put ren modding tools on that one. i also get much more mad because i made my own server that had a cool mod in it where i replaced i nod apache with a nod banshee and i spent more than a month configuring that. (i did not really know how to do it at first.) and now my online play does not work! can someone pls pls pls pls pls tell me how to fix it again, for the people who help me if they play on my server they will get some sort i prize i have to think about it.

(oh by the way, it not a problem with XWIS.)

The MOTD should tell you why it's not showing any servers.

what is the MOTD

(p.s. sorry for my bad grammar on that other post, i was in a hurry)

If your mod changed the server.dat file then you will need to undo those changes, as the server.dat file controls which servers you see (thats why you only see APB servers when running APB)

EDIT: I *think* its server.dat, but I might be wrong and it could be always.dat or something, I am sure someone will correct me if I am wrong...
