Ok, I'm not going to point fingers at anyone, yet. I don't know where I got it. But, I have I have a big bet, it could be one of the servers could of been infected with some kind of worm. The servers I played on was:

1. Jelly server Aow one
2. N00bstories
3. Black intel 1
and Black-cell

I don't know which one is infected, but there could be other servers I could of been on.

I don't where it came from even.

I.. Don't understand the logic in this post.

But I'm going to guess and say it wasn't from Renegade?

There isn't a downloader in Renegade so it's very unlikely.

You can't get spyware through playing over a server.

The only way you could have ended up with spyware "through" renegade was if it hooked itself

onto your connection with the server, AFAIK, not possible.

sorry, I found the source and has been removed. The logic in the post was that Command service stringed it shelf to rengaurd and renegade. I remove the strings. So Nonimate me for the "stupidest post of 2007"
