well i know iv been annoying and i know i been asking a lot of crap and im srry i guess since no one wants me because only one or 2 ppl answer my post here once in a nig while i guess i have no reason here im sad i wont e able to do mods i wont because u guys taught me soo much i guess i can finish my last script and my last few errors to someone in a pm because i have no one else will fix them if i post them here

i may be here and help answer other but not really be posting stuff for a while

thanks

reborn
whitedragon
roshambo
and others that i frogot :S

if u whitedragon can help em with my last problems im my pm and a few other things id be one with my project thank u all but i guess im not respected or wanted later.....

Dude.. The thing is, your questions are all very simple questions that you would be able to fix if you actually knew C++. It seems like you don't really grasp the concept of programming and how the language works. I think I started here when learning C++, but I also have experience in several other languages as well: http://www.cplusplus.com/doc/tutorial/

I would help you but 1) I do not agree with Yonegga's actions and will not support anything with XpZ(I think you know why), and 2) it does not seem like you actually even understand the coding; It looks like you are asking for people to code for you, and then just copy/pasting the code into your scripts.

I suggest that you just fool around with them.. See what works, see what doesn't. If something doesn't work, don't come running to the forums asking for help. Try figuring out what is wrong, if there seem to be errors in your code track them down and try to see what is wrong. Only if you have no possible idea and have tried as hard as you can to fix a problem, THEN ask for help on the forums. If you really don't know what to do, then look around the files included in the Project and see what commands there are/how to use them. Most of them are preeetty explanatory.

i arnt doing the scripts for him im doing it for the players thats whats counts and i have messed around i can say this over and over i spent HOURS and HOURS every single night messing with this c++ stuff and when i run into somthing i ask for help i mean please help if u can ignore about yonnie and help me help the player i can care less about him he hasn't played in a long time....our 2 top admins be running the show...........since the moder left i told them id take my time to ask people for help and learn this crate i mean when i first came her ei did not know anything about level edit now i know a LOT and now im started to understand a little c++ but then people quieted on me i mean that tut on C++ may teach me but not teach me much about ren scripts c++

and ps yonnie to me never cheated iv owned him before one guy said this and started a chain reaction and now everyone says he hacks because what they heard around with no proof and then after that people started making fake crap put of no where

View Forum Message <> Reply to Message

You simply can't learn c++ by constantly getting everyone to do your code for you and copy/pasting that into scripts.dll. Ok, so something isn't working, look for something in scripts.dll that does something similar and see how that works, it might help you figure out what to do for your script.

People stopped answering you because you were regularly posting 4 or 5 topics every single day, which is really annoying because any other topics get drowned by all the ones you are making.

Yonnie cheated, I proved it, the end. I'll put that behind me for now.
After talking to Goosy and seeing his hard work I might start helping out at XpZ again, given that Yonegga doesn't try to ban me again.
The reason that I wanted you to look at that tutorial is because you do not have a basic understanding of the language, much less enough to be able to efficiently mod the scripts with. Check out that tutorial, if you're really spending hours upon hours every day trying to work out these scripts, then checking out these tutorials is only going to help you as you obviously have a lot of spare time.
Many of your problems that you post are pretty simple, and you would not have them if you had an understanding of the C++ language.. That's why I want you to check out that tutorial. If you can't take the time to do that then I will not take my time to help you as my time is pretty limited.

I will help when I can, but sometimes your questions take allot of time to answer, especially when there are so many of them. Everytime I answer one question there seems to be three more in the same topic.

I don't think there's anything wrong with asking questions, because that's what this forum is for. But sometimes your questions demand an involved answer that are presented rather poorly, I sometimes feel inclined not to spend the ten minutes answering because of the lack of time and effort put into creating the post.

For example: "Hw u mak teh crte wer u get fog n stufs on teh map?!?", now I know your posts areant really that bad, but there not too far off... I'm sure allot of other people feel the same way. They would help more if you wasn't so lazy with your posts.

please do man idk what really happen with all that crap but all i know now is he drops by once every month and doe snot oplay for a long while me,socom,mark,goosy, and other mods have been making the server up not yonnie

goosy=mods,ts,forums
socom=server,security issues
mark=irc,mods,bots,website,server,forums,etc
me=mod the game,mods for game
yonnie=nothing
other mods=mod player and game

so please consider helping out we are not a bad server we really arnt
no noobs or people starting shit we have a good fun server because idc about yonnie i can care less
but ITS ABOUT THE PLAYERS

pS: goosy talks on ts now

and reborn im srry bot that im lasy typing its just that i have trouble typing with my fingers like they way it is i cant control it i know u help alot i just have so many questions i just hate waiting but im sorry man

View Forum Message <> Reply to Message

meh idk all about that but its been real good laltey we have i think let some old bans back in only a few for disrespect reasons but people with hacks they will forever be banned we did not mess up anything that should not been
but now its good
we have good rules
we nice
fun games and matches
and etc but all u guys mostly do is think about yonnie cheating its old news and ect etc
idc if he did or not becuase the ONLY reason i said is because the server is great.......
yes hes the owner no he dont control it
we do.........
i also only stayed to help the players i cant stress that enough cheats or no cheats if we arnt there to people them then who are we to say ......

ps if u guys have not yet figured out joeis my fake only name

EDIT: also to add yes we have lost a lot of mods AFTER the yonnie thing we had mods that broke the rul;es and mean to the players and always abused thats why we demoted them and then they come back ingame starting ttrouble

"i hack omg bann me"
"fuck u"
"fuck this serv"
"n00b server"

lot of our ex mods that did nothing but WRONG are now gone so dont let anyone tell u that we dont care becuase we took some mods out so that they wont be making use look bad i mean if some mods were just plan and bad would u demote them? i think so
and im bringing this to let people know that not all mods are leaving because of use but there own fault

If you have trouble typing and can not correct it yourself, then you will never be able to program anything...

fowr (imt varable = 0; varabile < 3; varabile+=)
{
}

Just won't work.

If you can't figure out how to do something, try again, and again, and again, ... If you really tried for a couple of days, then take your time and describe, in clear words, what the problem is. As short as possible, but with all required info. As clear as possible. However if you start 5 topics a day with 3 subquestions, you can at most have spent 1.6 hour for each problem, if you don't sleep, eat, go out, or anything else at all. That's just too early to ask. Try it for a couple of days, even if it's as simple as changing a name somewhere. You won't learn it because people are simply telling you what to do, you will learn it when you actually do it yourself.

Myself, I have never asked any question on any forum about C++ iirc. Some questions on IM or anything perhaps, but hardly any, and they hardly ever helped me either.

This is a place to ask questions indeed, however, this is a place to ask questions to learn modding, not to ask people to do some modding for you. If you really want to learn it, only ask if you really really really can't figure it out yourself.

Instead of trying tutorials, try to edit things in scripts.dll. Don't make your own stuff, just edit names etc. Then try to change simple things, then build up experience that way. You can't just read a few tutorials and make something really cool. Tutorials only help you with the smallest basics.

No one is implying that we want you to leave, or to distract you from what you would like to do, but trying to mess around with the scripts now in the stages they are is highly complex.

When I learnt C++, I had wrote PHP scripts using OOP and also played around in VB.Net. It gave me a great starting point but even so, C++ was like another world. Nothing is done for you in C++, it is solo coding all the way.

If you want to learn to edit the scripts, I suggest you read over C++ and learn some of the basics. Then start trial and error. For example, find the part script that gets called when a solider is created and add a gun, send a Private Message or just give them so points/cash.

You can't just write scripts and expect them to work, tweaking and bug fixing take a major part of it until you are so good, you can normally write them first time with the odd mistake here the there.

JOE YOU FOOL KEEP POSTING STUFF!

If no one post stuff here daily, then ren mods will be half dead, your keeping it alive by making your mods and asking for help..well pretty soon I may be asking for help here and there too, I mean yeah sometimes it's annoying and all, but then sometimes when you think of a cool idea, it's interesting to read your scripts.

Joe I have idea.

Try using lua for the main mods for your server, then try using harder things in scripts.dll

I am currently editing our mods into lua and what took me 2+ hours of work in c++ took me 30 minutes in lua, not everything is possible in lua, but almost everything is, the other sutff that cant be done in lua, just use c++ in scripts.dll.

Money is not a motivator therefore you should only code if you think you will enjoy it and the aspects involved that come with it.

RoShamBo: There is still a place for Native C++. I don't think proper Games will be written in .NET just yet, or prove me wrong...

Lua is very easy to use Joe, I still dont know much, but for mods such as changing character once you have one working, just copy and paste over and over, then rename the command, then set the money ammount it cost for that character, it will work, same for spawning vehicles infront of you. Other mods, they just use presets.
