Sir Kane wrote on Fri, 20 July 2007 07:28: Fuck off with managed code or whateverthefuck else

that is.

Hahahaha, Getting aggressive over some simple Visual Basics code? hahaha, Oh man, Your funny, You are funny, Want a cookie for telling a newbie programmer to fuck off?

Oh.. I won't fuck off, Infact I'll keep it up and watch you get pissed off over more simple code, And I'll keep laughing.

Joe: It's some code for Visual Basics 05, But it's nice to see you got a book about C++... I wish you luck as C++ is a pretty hard language to learn, But it's advanced.

I wouldn't recommend anyone to learn Visual Basic, as it really sucks.
The advantage of learning C++ is that you are programming close with the memory and it's easier to understand other languages (Visual Basic is the big exception) if you already know C++.

Pascal + delphi is also entirely unlike C. But yeah C++/C is the best, and make sure you stay miles away from .NET and the std framework.

Fantastic!

I also bought that book, but I regretted it.
A really good book for beginners that I found really useful and still do, is this one:
<http://www.amazon.com/exec/obidos/ASIN/0321246950/lynnallain>
You can get it really cheap too.

And remember, .NET is your friend.

As a matter of fact, i've got one now.

(actually i have a carlton draught, don't like vb all that much. though it's brewed down the road from my old school)

drunkill wrote on Fri, 20 July 2007 11:29it's brewed down the road from my old school Most of New Zealand beer (DB, Export, Tui) is brewed round the corner from where I work. ^_^
Coincidentally, there is a Tui pub next door to work as well.

Sorry for derailing the topic, it was far too easy.

Cat998 wrote on Fri, 20 July 2007 08:11I wouldn't recommend anyone to learn Visual Basic, as it really sucks.

Visual Basic doesn't suck. ./ It's a good starter language for beginning programmers. It lets them get the feel for 'real programming' later on when they decide to make a Managed GUI.

It does suck. If C/C++ is too hard for you, you shouldn't be programming at all. Also, managed code fails just as much as VB.

Sir Kane wrote on Fri, 20 July 2007 13:20It does suck. If C/C++ is too hard for you, you shouldn't be programming at all. Also, managed code fails just as much as VB.

What's your reason behind "managed code sucks"?

The best way to go is to just download and look at some C++ code until you can understand what it is doing. And don't be afraid to ask questions.

Don't worry about him asking questions. He's not scared of it.

On a more serious note: Can you do different things with different languages?

a100 wrote on Sat, 21 July 2007 16:53Quote:On a more serious note: Can you do different things with different languages?

Yes

C++ can do everything too that other languages can.
ANSI C++ is platform independent and close to hardware.
Only in assembler (low level language) you can do even more.
