Ok i am having a few problems, if just one is fixed the other may go away....

First, when i tried to install RenegadeFDS for westwood and typed in my username and password and serial code (i think it wanted the one on the back of my case :/) but no matter what, the next button stays un-clickable, all of the fields are full with my information, i don't know what the problem is.

I got around this by just installing it for gamespy, and then transferring the server.ini to the folder...which MIGHT have cause my next problem.

I click Renegade Server and it starts up and after 2 seconds it says aborting because no admin password. Well, i (think) i fixed that in the .ini file by typing a password in. I try again, this time my hopes get high as it does a bunch of stuff. Finally its saying its "creating game channel..." and im like "sweeeet" but then of course it doesn't work, it fails to create and retry-s over and over and i have to type quit to stop it.

What should i do?

Serial good?

Nickname and password good? Set the correct port?

if the serial that is supposed to be used is supposed to be the same as the one that came with renegade and is used upon installation then yes. Name and password good. Port is blank, i don't know what port?

(edit) - it says it should be left to 0 which it is... unless you want to specify....

(edit2) - ok, well i decide to do more tries, but it fails to log on, i onyl change i port and i changed it back and it still wouldnt log on, so i go into renegade and i cant connect online? maybe westwood online is actually down?

Hmm, Did you edit server_cfg.ini (something along that name) in the server/data folder?

Set the maps, etc?

Try with a different serial and username/password anyway, just to be sure that's not the problem.
As username, try using your own and as serial try using one of a friend.

I think your current host XCC WOL IRC Server was changed by XWIS WOL IRC Server Client
utility. Normally is there USA Server and last week was changed IP of XWIS because was moved
on another servers.

So start XWIS Client utility again and click on button Reset (WOL).

If you havent it. Use this copy.

Thanks for trying, (i did try with a friends serial and no good). I did what ExEric3 said and it
worked.

Good to hear it.

But its interesting because your screenshot say: Logged on OK (only failed to create game channel) and XWIS running on another IP.

Maybe this confuse my friends. But it doesnt matter. Its already fixed.

I have the same problemm... and the tip of ExEric dont work on me...

Other problemm: If i make a server for Gamespy, it works...but if i like start renegade it comes nothing... if i join gamespy i cant find my server...but its running without problemms...

I had this problem awhile ago, thankfully NightMa put me right...

Please make sure that your serial number is correct, this is the serial number from your game (without the dashes), getting the serial number from the registry does NOT work...

Also check that your login information is correct... Can you acctually login to WOL with the username and password you have?

Hope this helps.

Thats Sxxxx... nobody can fix that...
I have Typed the right Name, PW and serial code... and if im going to
http://renegadeserver.westwood.com/RenegadeFdsReg/index.jsp to get a (new) serial it says:
The FDS registration system is current down for maintance. Please try again later... does sum1 have a idea?

Acctually this isnt true...

You can enter any serial number on the installer as long as it starts with 0669...

Please try to use your game manual/box serial number, if you have already then i dont know.

p.s.
You dont have to reinstall renegade FDS in order to change your serial, open server.ini and change it there

You need to load APB before you load the FDS. It's part of how the FDS works. (Alternativly, add +multi to the shortcut command line for both APB and the FDS)
