Well it starts like this
when i setup my FDS wol server
it will open but crashes when it wanne connect or something
i can do it with GAMESPY.
but when i use the WOL server it keeps crashing
whats up with that?
gamespy will work
and wol dont
and believe me i do everything correctly
maybe the pc too slow ?
im using a Pentium 3 885 mhz / 256 ram must be enough right

Hey
Sounds like u got the same problem as i did

You probs dont have the WOL Components installed, When you install the dedicated server
choose WOL mode - and enter the Serial number of 0699, then hold 1 until the Next box appears.

I believe you have installed the server in gamespy mode, and changed "GameSpy" to "WOL" in
the server.ini file...

Please try this and get back to us.
