This has everything to do with Renegade, not Renguard. Anyways.

Does Installing Scripts 3.4.1 help?

I get something similar when I quit Renegade but I can just live with it.

You may also want to post the dump-file that was created (as the error specifies).

\*sigh\* we don't want a picture of the crashdump files, we want the actual FILES uploaded, so that the programmers of scripts.dll can look at them and see what's going wrong.

EDIT: And, from what I can tell that seems to be a debug build of the scripts.dll, which you should certainly NOT be using unless you develop code for scripts.dll, as it results in much lower performance... unless jonwil changed the scripts to output crashdumps to a debug folder now..
