I don't understand what you mean. You sure as hell can't click "Open" and target scripts.dll, LE wouldn't like that...

Be a bit more specific?

Did you also include scripts2.dll from your renegade folder?

EDIT: I think you have to use plain 3.x scripts.dll actually, the SSGM code is server side only, and as such won't load on either the Renegade Client or in Level Edit.

Man, get Jonwills Level edit... there you dont need to create a folder with scripts and u can export your maps as a mix file.

That has nothing to do with this, he could have JonWil's LE and it still wouldn't work.

Blacky, why didn't you just make a LUA Plugin instead of having to edit the scripts.dll completely?

The stuff you were making for the sniper server was basic Dragonade stuff that you could of made into an LUA Plugin.
