When I start Renguard it checks all of the stuff in data and then tells me that some files are damaged and need replacing.

When I click the link I get a page not found message.

Could someone email me the Always, Scripts and C&C Glacier Flying files to me?

Wow, someone needs to fix those links.

Anyways...

Some wonderfully polite individual uploaded all the various Renegade files here

Don't hesitate to ask if you need more help.

Sorted renguard out. Cheers for the help. Now a new problem has cropped up.

When I try to make a new account through the westwood online server i get a message saying "page failed to load or is invalid".

I have turned off the firewall and closed all other applications.

Creating an account is now as simple as just logging in on an UNUSED nick with the password you want.

If you had taken time to read the stickies in the Core patch and Renegade client subforum, you would have found the answer to these questions.

I managed to remember my username and password from over 2 years ago when I last played.
Cheers everyone for their help.

I experience the same problem.

Renguard tells me I need to download "scripts", but the Download link wont work. Got an alternative Link from the support-chat, but with this file it still doesnt work.

What to do now?
