Okay, I'm changing the sounds of the Apache, and Chinook Helicopter. Anyway, the file name to rename it is apache_loop or something around that line. ANYway, anything that has the word loop in it plays like any other engine sound, but it always pauses and restarts . Now the WS sounds don't do this. How can I stop mine from doing this?

I was listening to the WS sound for the Apache on LevelEdit. You notice the loop on theirs to, but generally just if you're watching for it. We'll just have to make a really long sound for a vehicle, and make sure the repeat isn't really obvious

Its just how you create the sound...to be a seamless loop the sound must end with the same pitch/sound as it began.

erm, what if you don't make the sound? What programs can you use that are free to edit the pitch?

u dont need to edit the pitch to make it a seamless loop...just use any wav editor (soundforge,cooledit)and make sure it loops correctly....but it still won't loop right in commandotry a .wav instead of a .mp3(i havent yet but it might work)
