Hi guys! I'm not sure if this is the right place to ask, but I'll try anyway. How do I set my server FPS to limit to 60fps? As it is, the fps goes up to 300+ and that is too much for a server. Thanks!

You use a FDS or just host it through renegade? FDS has a limit of 60 standard, as does renegade. If it's through renegade, go to "bhs options" and put vsync on.

You can also run BlackIntel.dll whihc has an option to limit SFPS.
