[View Forum Message](#) <> [Reply to Message](#)

Hello together!

Finally, after few weeks of hard work, I finished a program to convert Renegade maps back to LevelEdit level files.

Please report warnings, unusual errors and bugs to yrr@icefinch.net.

Download: <http://www.icefinch.net/files/LevelRedit.zip>

Usage: Add one or more Renegade .mix maps.

Set the output folder (you'd use your LevelEdit folder).

Click on 'Convert Now!'.

After converting, open LevelEdit and choose the mod package which has the same name as the map you just converted.

Open the .lvl file for the map you converted.

After conversion, to complete the map: Remove pathfind generators you don't need. The converter automatically creates pathfind generators in front of each carmaker, which could be too much.

Remove duplicate tiles. The converter may add tiles which were already imported with the terrain and therefor may be duplicates.

Add pathfind blockers as you need them.

Save the map.

In the menu, choose 'Pathfind' > 'Generate sectors...'. This may take much time.

Save the map.

In the menu, choose 'Lightning' > 'Compute Vertex Solve', check 'Check Occlusion' and hit OK.

This may take much time.

Save the map.

You should add and apply VIS points to improve the map's performance. Skip this if you only want to test the map.

Restrictions: As mentioned above, LevelRedit may produce duplicate tiles.

No editor only objects will be generated, you have to add them by yourself.

No VIS points will be generated, you have to add them by yourself.

Protection: If you don't want your map to be converted back to a LevelEdit level file, place a light anywhere on your map and set it's ambient light color to RGB(51,102,153).

You cannot protect old maps you already released.

Awesome, I've really didn't think it could be done, am happy to say that it has.

I've tested it and it works, loaded up siege, everything is there.

I'll did have alot of problems with it crashing alot, but I've plugged the folder into my test modding folder and it works.

Good job.

I've also put it on Game-Maps.NET now, you can can download it here: >>Download<<

I'll hope you don't mind, do you have a website or anything that I'll can link you too?

EDIT: what about PKG's?

I'm not going to support PKGs right now. Try to play around with it, maybe it already works. E.g. if the .pkg contains a Test.lsd/ldd, rename the *.pkg to Test.mix, extract the objects.ddb into the LevelRedit/data directory and try converting.

Level Editer.

I'll first unpacked it and all that, that work's fine.

Moved the .lvl folder to my main modding folder, placed it with the other Levels.

Started Level Editer, make sure that the presents are right, then started to load the map, then it crashed.

Straight to the point:

Awesome job!

Subject: Re: LevelRedit, a .mix to .lvl converter!
Posted by [Slave](#) on Fri, 14 Sep 2007 21:12:12 GMT
[View Forum Message](#) <> [Reply to Message](#)

In other news, i loaded up metro_ts.

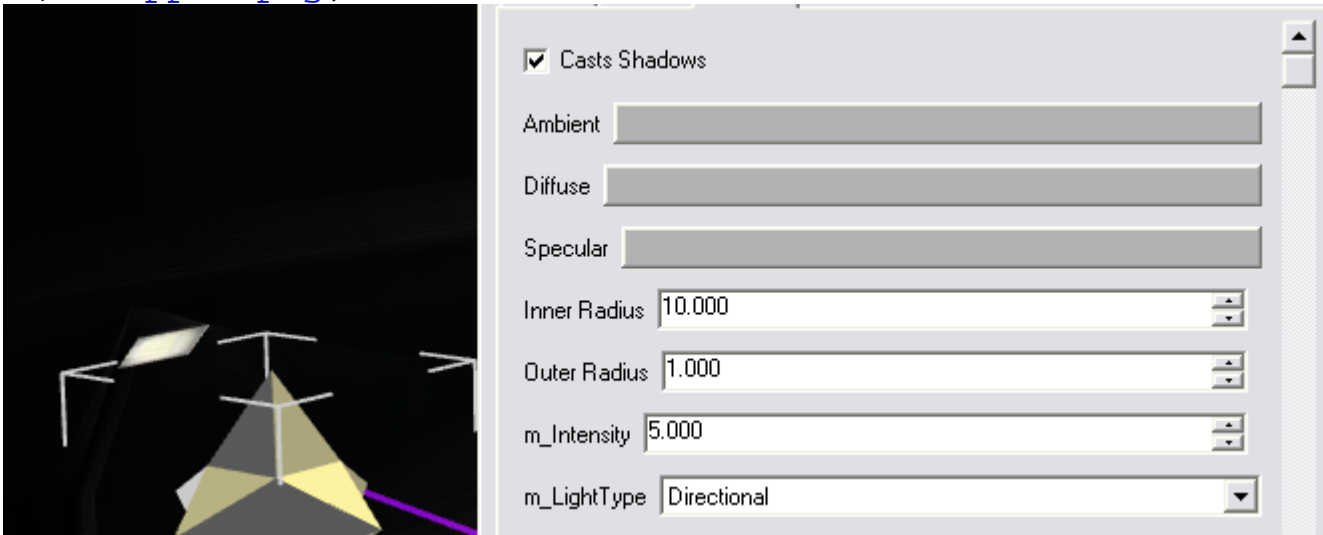

But this doesnt seem quite right. Happens to every light, and it's obvious whats wrong. Mixup!

edit: I just checked it out, and it appears to be wrong on at least 3 other maps too. Most likely any.

edit: Also, why are all lights directional? Spotlight would be the weapon of choice.

Hey,

I don't want to spam your topic with something that might be a dumb remark. But I was unsure why the following get's done.

Right after converion, scripts.dll and scripts2.dll show up in the Scripts folder of a package. It's your provided scripts.dll and scripts2.dll from my renegade directory. Wich is pretty much the same file. Is there any reason why this gets done?

Also +1 cookie for the update. Thanks.

edit: and ofcourse i meant "Point" lightning instead of "Spotlight" in my above post. You fixed it the right way, it's all good now.

Subject: Re: LevelRedit, a .mix to .lvl converter!
Posted by [Yrr](#) on Fri, 14 Sep 2007 23:33:28 GMT
[View Forum Message](#) <> [Reply to Message](#)

The scripts.dll (Custom Scripts) was extracted from the .mix file and the scripts2.dll (Renegade default scripts) is the scripts.dll file from LevelRedit.

[View Forum Message](#) <> [Reply to Message](#)

I took a look at the skirmish scripts a while back and 90% of the work is done by 3 scripts, MSK_Info_Zone, MSK_Soldier and MSK_Controller.

The real work happens in MSK_Controller which is VERY hardcoded (including object IDs for various objects located on the map)

I was just playing around with replacing whole maps server-side and I had the problem that doors did not work.
To resolve this problem, do not delete door tiles, but delete the doors from the terrain itself (as mentioned in the first post, some tiles are duplicates, and doors are some of them).
Alternatively you can set the terrain door's ID to the tile door's ID and remove the tiles.

I cannot automate that since I'd have to load the terrain W3D files, what is much work and I don't know anything about the .w3d file format.

Edit: This must be done for elevators, too.

[View Forum Message](#) <> [Reply to Message](#)

Great tool, I'll give this a try, I needed some .lvl's for a few maps awhile ago...hopefully I'll have

them back.

You mention "add VIS points"

does this mean VIS is still generated for a map that had it generated?

Subject: Re: LevelRedit, a .mix to .lvl converter!
Posted by [Yrr](#) on Sun, 16 Sep 2007 02:21:50 GMT
[View Forum Message](#) <> [Reply to Message](#)

I mean that you have to add manual VIS points, which cannot be reconstructed.

Subject: Re: LevelRedit, a .mix to .lvl converter!

[View Forum Message](#) <> [Reply to Message](#)

Yrr wrote on Sun, 16 September 2007 15:30 I don't know anything about vis sectors, so I cannot answer this question.

Probably not then, easiest way to check would be to go to a spot that you know you had to add some manual visual points in and see if you can see in that position. If yes then you will have to regenerate the vis system.

[View Forum Message](#) <> [Reply to Message](#)

LevelRedit v1.03 is out!

Changes:

- Every waypoint was 0.2 units too high in editor. (For unknown reasons, LevelEdit raises every waypoint by 0.2 units when exporting a map.)
- Scripts were not attached correctly (some were attached twice, some were not attached at all).

[View Forum Message](#) <> [Reply to Message](#)

Well Westwood is nothingness now, so that's basically a lost secret. (You could bring up EA, but it's EA... that would never happen.)

Subject: Re: LevelRedit, a .mix to .lvl converter!
Posted by [Jerad2142](#) on Tue, 25 Sep 2007 22:43:42 GMT
[View Forum Message](#) <> [Reply to Message](#)

I would guess that they are scripts attach to invisible objects on the map, (like scripts that control the bots, but are not attached to them).
But I am making some scripts that are actually better then the ones on skirmish, and they return to their way path after not seeing or being damaged for a certain amount of time.

[View Forum Message](#) <> [Reply to Message](#)

Useful tool overall, but im kind of getting owned by a door issue on C&C_Sand.

I first used method one, removing the terrain doors. But this way the harvester bays remained closed on unload.
So I started over and removed the tiles, giving the terrain doors the correct id.

Method 2 works great on every building exept for the HON. In 1p lan mode it runs perfect and opens like it is supposed to open. But as a client on a server, where both have the edited Sand.mix, the doors remain closed. You can lag through them, but it just isn't right.

So the 3rd thing i tried was removing both the terrain and tile doors for the Hand. But every single time, after leveledit reloads, the terrain doors are there again. When exporting to mix they remain closed ingame...

I'd appreciate it if you could look into this problem.

[edit]

I'll try disabling the terrain hondoors through the instances tab in leveledit, by simply unchecking them. I'll report in when I have results.

[edit2]

As soon as i uncheck them, they dissapear, but when saving or exporting the level, they show up again, even though they are unchecked. meh.

Subject: Re: LevelRedit, a .mix to .lvl converter!
Posted by [Slave](#) on Mon, 01 Oct 2007 21:03:58 GMT
[View Forum Message](#) <> [Reply to Message](#)

update...

Instead of unchecking them, I deleted their nodes at the instances tab. This removed the doors, but also the rest of the terrain.

At this point i believed my mod package was pretty much screwed up, so i deleted it.

Luckily i made a backup last week, before I started fixing the doors. But when I open it up, the entire terrain doesn't show up either. Wtf! Why must Renegade be so mean?

[edit]

Don't worry if these posts confused you. They had the same effect on me after reading them over.
