Ok, I want to do Multiplayer Lan so I can test my stuff in game without having to go through the Multiplayer Practice. But when I try to do Multiplayer Lan it says "Couldn't Find IP Addresses", and doesn't let me do anything...What do I have to do so I can use this?

you need to have a network set up. in other words, you will have to have more then one computer, all hooked together usley by a router, or hub.

Basically it's looking for a Network Interface Card (NIC) with the TCP/IP protocol setup on it, which gives it an IP. You can add one in windows to make it think you have one.
