The best way to be totally rid of it is to restart your comp, and the only way you get 0 bug is by playing mods. Only a few mods will give you zero bug, but its good to play mods only when thats all your going to do other wise when you play regular games the 0 bug appears

The Zero bug usually happens when you have too many mods installed on your comp.

I know what the 0 bug is and how to get it, I wanted to know how to permanently get rid of it. I thought it was caused from tiberian evo mod. That's the first place I had it. But I guess I can't permanently get rid of it. [ February 22, 2003, 17:44: Message edited by: dead4ayear2 ]

Its not the Mod or anything related to the kind of Mod It is just the source code. To prevent the Bug PERMANENTLY restart Renegegade, and join directly the Mod you wanna play, after you played the mod, restart Renegade again.The bug will never apaer if you do it this way.( The bug appears in 95\% of cases if you have played a .mix (C&C-Mode) ga,e on WOL and then join a mod, and in 50\% of cases it happens if you play a .mix after playing a Mod Game before)If you have notived other times when the Modbug appears, let me plz know, so I can correct my point of view.
