I went thru all the hoops of installing the latest Rengaurd and was able to finally login to Renegade...only now there are no games listed under Advanced Games. Before I installed renguard I would get listings but all of them said version mismatch.

I was able to play this online before but now nothing.

When I log in it states that there are players online..but no game listings

I am running Windows XP Professional with a 2.4 Ghz Intel Prescott 1MB cache CPU 1.5 GB RAM thru a 12 Mb cable connection.

Nothing has changed in my system and as I said I was able to get listings before..so am I missing something or what?

I would like to think that this game is still playable online with renguard.

BTW I am not running any firewall or anything like that.

That's because you need to... Install Renegade in the right order

There is a patch for the game which you should have installed first.

Point of interest - Why doesn't the Renguard installer include checks for the client's version?

If that doesn't work, reply, and I'll try something else.
