Subject: Cant get maps to play with Mod
Posted by Anonymous on Sat, 22 Feb 2003 07:39:00 GMT

I've been searching the forums for an hour & a half to find out how to fix this. I need help. When I go into multiplayer lan w 1 player set to test a mod, I go to map selections & select a mod but no maps showup for me to select (they all disapear when I select a mod).I can change things with the editor tool, but cant test anyting.My question is what do I have to do to use a mod with the various maps?

You can only use the mod with the maps that are included with it. normal maps are in MIX format and cannot contain mod data. Mods are in pkg format and contain several maps. An option to use mod data on all maps would have been nice but wasn't included.
