Ok first off i know this is a crappy video card...

I just installed a radeon 9800 pro agp 128.

After i installed the drivers and everything renegade wont open. everything else opens just not renegade when i click it it says you have encountered a problem and needs to close blah blah.

I dont use renguard because it used to crash so that is out of the question.

Would reinstalling ren work???????

Please help.

If a program is broken or non-responsive and all else has failed follow the oblivion creed: Delete All, Reinstall.

You should take the new graphics card out and microwave it for about seven minutes and twenty eight seconds. That should fix all the broken microchips.

Is this on Vista?

If so check here: <http://www.renegadeforums.com/index.php?t=msg&th=26283&start=0&rid=996>

EDIT: If not I don't recall anything else that is similar. Past that you might want to let someone connect via msn and poke around a bit.

EDIT2: That card is well within Renegade requirements so unless its faulty hardware wise it should be fine.

My old system had that card. I never had a problem like that. Are you sure the card is fucked?
