<http://www.erightsoft.com/SUPER.html>

Don't be put off by the lame page layout, and the especially hard to find download link...Super is awesome, and totally free, and converts anything to anything.

I also suggest having the CCC: <http://www.cccp-project.net/>

Erm... What?

Care to rephrase that in readable English, thanks.

Works pretty well but doesn't take full advantage of my Core 2 Duo.

Sadly a direct download link like that doesn't work. Since Super is free, the only way they make money is probably via the ads on the site, so they make sure you get exposed to them

Only hits about 50% on my E6850 and I'm running it at High Priority.
