Since upgrading to BR 1.52 I have noticed a major change in the way some settings are configured.

As for mapsettings.xml how does this new file work?

So far the file seems to have no affect. Is there a place where I have to specify the use of this file?

Do you have the module for mapsettings turned on? (!modules) IIRC you have it in the BrenBot DIR along with the commands.xml

The file is in the brenbot directory and the module is turned on.

I did add a lot of maps to it, as it can very incomplete.

maybe it is syntax error?

If there was a syntax error BRenBot would report that when it was loaded ( Error loading mapsettings.xml: <reason> ). If so correct the syntax error and rehash the config.

I started checking BR's console and found the errors.

Everything works now.

Thanks for answering my questions. I appreciate the help.
