Note that "CP1" is not actually Core Patch 1, merely scripts.dll v3.44.

Apparently a year long misunderstanding. I will fix this for next release as well as some more cool new features

- Hopefully some config will be added
- CP2 if I can get it straightened out
- Most Likey Resurrection
- Maybe NR
- Minor additions to server install, Desktop shortcut & uninstall procedure.

Anything else you think should be added post below.

Other things that will be added eventually  
SSAOW, SSCTF, BR...

As I said before, a very handy tool. Hopefully you'll be able implement all those features in future versions and not disappear/quit like some other toolmakers do or have done in the past.

Nah I cant stop now, I spent long long hours making it already.. And downloads have halted already even with Goztow generously posting links on renegadecommunity.com

Also please note that with the link above, It will always link you to the newest version. (nice job goztow you got it correct ) This is also why uploading on your own servers is not recommended.

Edit: btw like what tool makers?

Like Minax71, the creator of RenHawk/RenVis. Disappeared and never finished it.

Even Brenbot was deserted a few times in the past, but luckily that ended up in good hands.

Ye tell me about it. I tried to take over RenHawk. Not a big hit with mac, Didnt stop me from doing the research in it though. Found some good results. Found a full working version a with a few edited lines you could add new maps etc.
