Hello!

I just got a vista and i just installed Renegade like 7 times. (I had an XP and worked great, bene playing for a year now)

Heres my snapshots so:

2nd A few seconds after Its searching for the WOL name

Please Help.

Thank you!!!

Edit:

For some reason my SS's aren't working.

Here's what Renegade says

Error: 00000005 (Note: I have changed my compatibility to every type and iv'e ran in administration mode!)

Then I click Game2.exe then it brings up Renguaard v1.0323

[01:10] Warning: No WOL name found. Connecting to WOL will probably fail.
Like i said, iv'e never had this problem with XP...

Does anyone know how to fix this or Advice?
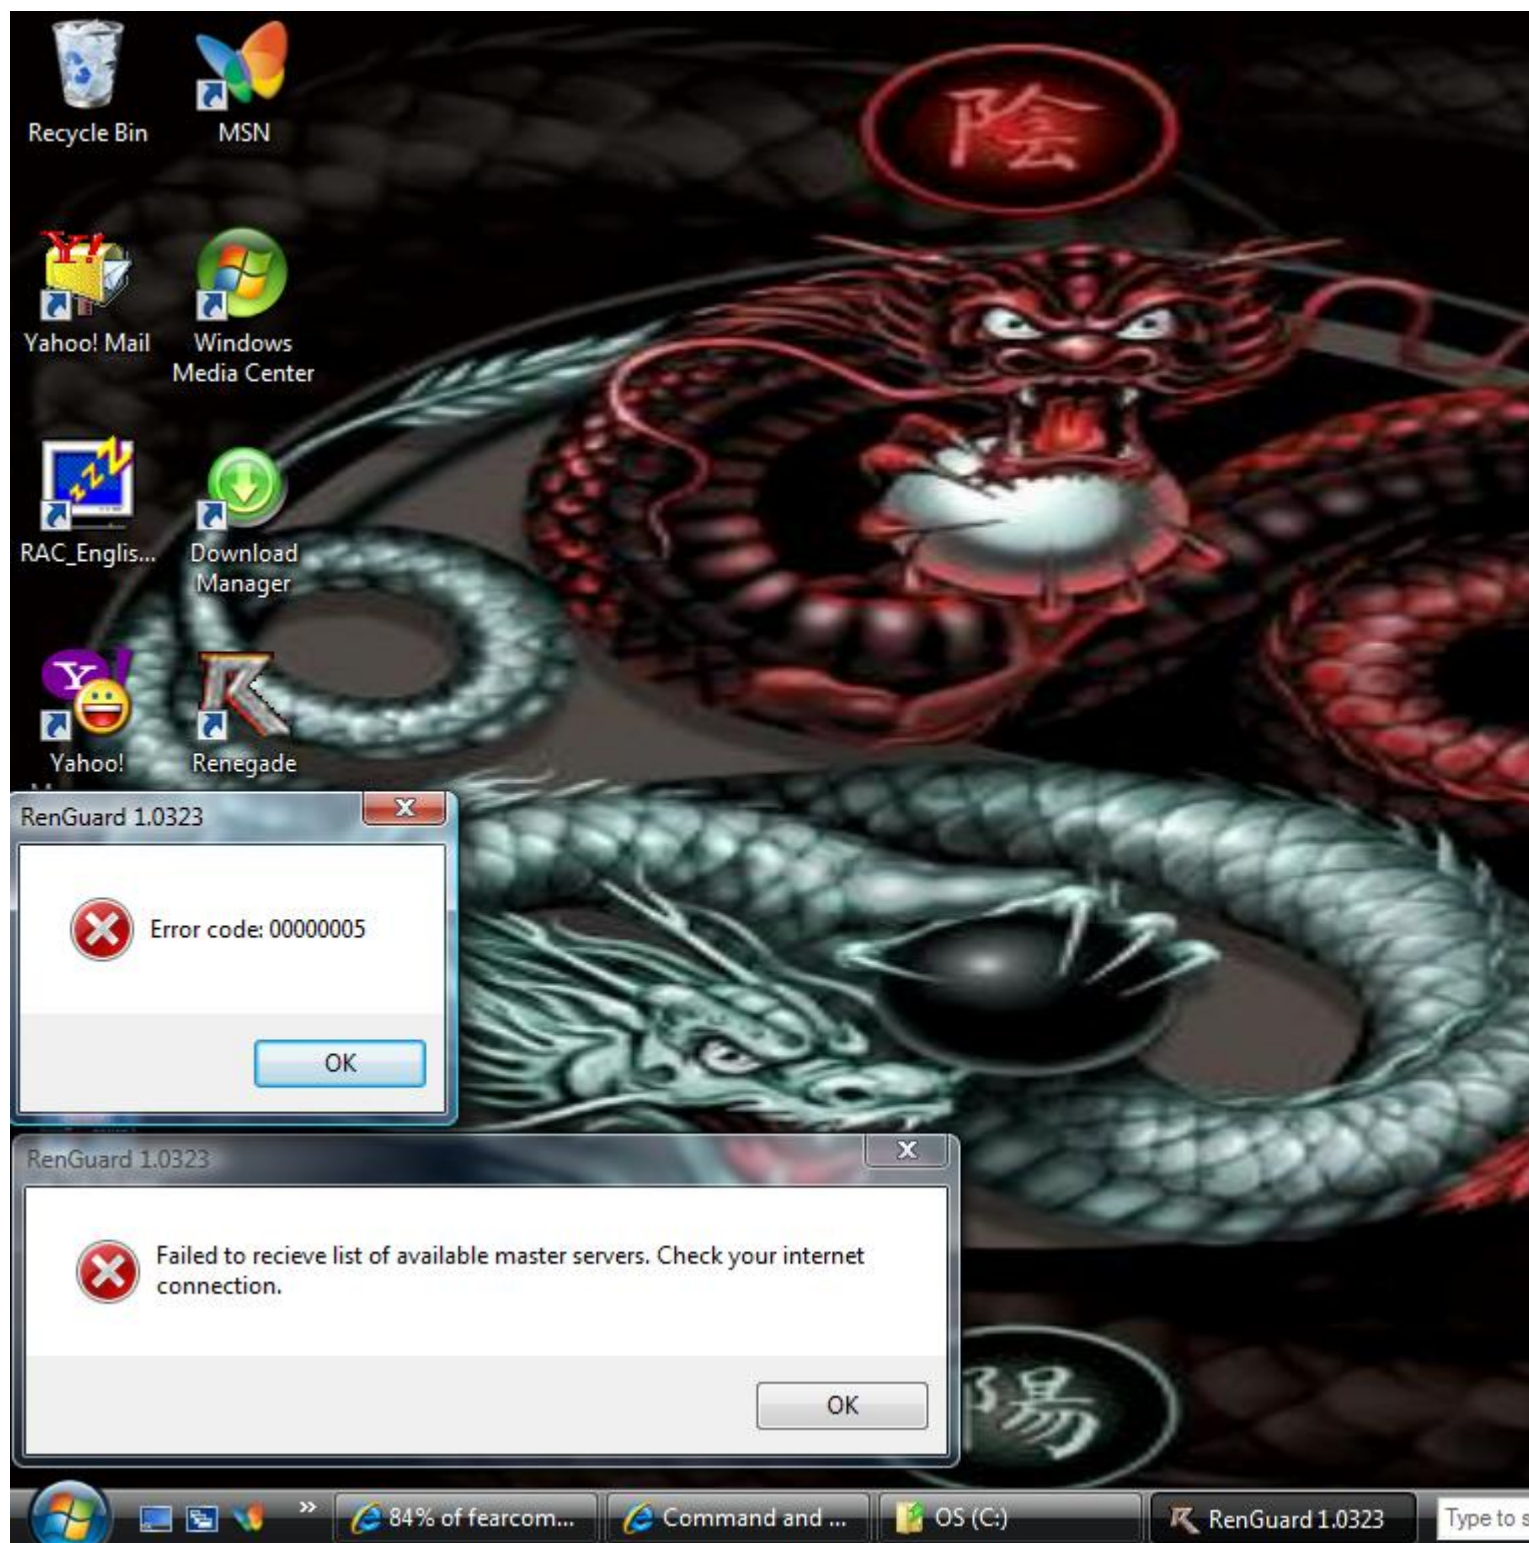

Thank you!!

Edit: Got the Snapshot's working

File Attachments
1) Error With Renegade.jpg, downloaded 646 times

2) Right after Renguard is trying to find a WOL name.jpg, downloaded 639 times

You need to set game2.exe and game.exe to run in win xp sp2 compatibility with admin rights.

The WOL name not found is normal the first time u run RG as you need to log in to WOL once before it knows your nickname. So just do as said above, run renegade, log into WOL, then close and restart and RG will have your nickname .

Okay, which website do i log into? can you provide a link or tell me where to go? I'd appriciate it!

Please let me know and iv'e already done the sp2 and set as admin

Website for what? WOL? Just load renegade, when renguard says no nick found press renegade, goto Multiplayer Internet > WOL > Make a nickanme. You can do this by just typing your desired nickname into the login box and add a 8 charactor password that starts with a letter. Once you've logged in, close Renegade and reload it. RenGuard will now say Welcome to RenGuard, <nickname here>

One of my nick's passwords does not start with a letter...

(just a random point, the topic starter can ignore this post)
