Well, i want to mod my FDS to my liking. Without it banning me everytime i increase the damage of a weapon or something. So i went and deleted all the files to do with biatch and the biatch.dll.

Then when i went to startup my FDS it bitched about not being able to find the "biatch.dll" and refused to connect.

How do i "Uninstall" biatch?

There should be a "mss32.dll.bak" file. Rename that to mss32.dll to replace the one currently in the folder. Note that name could be slightly different, but it will definitely have ".bak" somewhere in the name.

Just delete the "mss32.dll" and replace it with the "mss32.dll.bak" or whatever its called. It should work fine at that point.

Yeah it worked. All i had to do was reinstall the whole server but without the server.dat(No Gameplay Pending) option.

Thanks, problem solved. You can close the Topic now.
