I just launched RenGuard as per normal, went to join Jelly [RA] as normal, but as soon as I joined the game closed and my RenGuard displayed this message:

I then closed RenGuard, launched it again and I was fine, I'm guessing my case is the same as this one: http://www.renegadeforums.com/index.php?t=msg&th=26845&start=0&rid=2 2143
But thought I'd post here to make sure

Don't worry lol, it's just a bug. You should be able to play like normal.

You can ignore this false positive indeed.

Except that this very bug has thrown me out of a full server several times the last week, and again today.
As if Renegade itself crashing to desktop randomly during online play and usually above average pings weren't bad enough.

Renguard isn't the most stable application you'll find on the web at this moment...

Everytime I play in Red Army Gaming I get this LAN exploit. So I can't play on that server.
Everytime 100% of the time.....

I am behind a router, but DMZ'd.

????!

That won't help me.

It seems that everyone has the same problem connecting to the server so I am trying to find the
solution not a workaround.

But thank you anyway.

Then Red Army Gaming needs to check its severside settings for RG.
