Can someone please help me? I cannot seem to take screenshots. Used to be able to a few weeks ago.

Has anyone got the same problem? Oh, and does it have anything to do with keys.cfg?

What happens when you do "prt scr" then? Doesn't it save your screens to the data folder anymore?

You can always use a program like irfanview or fraps to take screenshots as well. You can then bind the screenshot button to any key.

The latest. 3.4.4 I think.

You could try downgrading the scripts version, but I think using irfanview instead will be easier. It has more options than the standard screenshot utility in renegade anyway.
