You add moderators in moderators.cfg, or to give temporary moderator powers use the !atm command.

I dunno if it's still available but there was a plugin that would do that. I think campa [apologies if I misspelled his name] made the plugin but I forget the dl link..

Is there a new link for this kicking around?

The functionality is nice and would help us to allow others to add mods.

Actually gkl21 put it up using the account I gave him, but yeah, it was only added recently (see the dates on the page).
