Once the game has finished loading the game shuts down, i think its the scripts arent updated from the great Dante, i have been looking for them for a while. Could someone take a minute to help me?

Use this http://www.renevo.com/downloads/sp1_0_1.zip . It contains both scripts files and an installer so you can't mess it up when installing the scripts. Jsut download it and run it. It will install them to the default renegade directory unless you need to change it.

Thank you greatly
I was having the same problem

:twisted:
