Got a stereo?

Read through this thread: <http://forum.teamspeak.com/showthread.php?t=21155>

Remember kids, Google is your friend (I pulled this from Google).

In Windows volume setting, set the recording device to stereo mix instead of mic.

Oh and for the sake of your friend's ears: do NOT do this... TS ain't made for music, the codecs are too weak.

What are you trying to achieve by doing this? I've seen people try to make internet radio using TeamSpeak when there are much ebtter options.

Or you could just use a shoutcast which has much much better quality.

That's what I was getting at. It does sound like a shoutcast server would be a much nicer (if more difficult) way.

shoutcast isnt that hard really, if you ask that is...
Plenty of manuals so...

Well no, but it does require editing config files (at least it did when I set one up) and probably opening ports on a router, two steps that a lot of people will cringe at.
