I have a nvidia geforce 7900 GS AGP

i had some issues with my draphics drivers,
i had crashes sometimes ingame and low fps.

what i did was formatting by harddisk
i chose NOT to format fast!

now everything works fine,
if you have issues with your driver or anything
try that

You didn't really fix the cause of the problem, you evaded the cause of the the problem by reinstalling Windows, that's something different. Next time try removing the old drivers in safe mode, then reinstall the driver. or do a system restore. In this way solving problems will be alot more learnfull. If I would do a reinstall everytime I encountered a problem in Windows hell,, that wouldn't have taught me anything.
