No doubt your IP range is 169.254.xxx.xxx! have no idea why Renegade does this, but it won't work on that range. Change your IP's on all machines to 10.0.0.xx. Have the server as 10.0.0.1 and go from there, its annoying, but playing Renegade is worth it - Hopefully its fixed in the final. [February 19, 2002: Message edited by: NodGod ]

I didn't understand that last statement, So I'll go in detail... Chnage the IP address of the NIC that goes to the hub/switch. Do this from Win98/ME by going to Network in Control Panel and going properties for TCP/IP for the network card. Change the IP from within there, or in 2k/xp, select your LAN connection from Network Connections, right click, go properties, go TCP/IP and go properties. Change the IP from within that window, have the subnet mask as 255.555.0.0 Bottom line is You can change the IP address of your LAN connection, but you will want to look to avoid to change your IP adress to your net connection.
