You're talking about EKT's Roleplay 2 server, aren't ya? -_-

Those are custom scripted server-sided by Sniperhid (aka EKT-Snippers or something like that) and they're a private thing, server specific...

Although, you can easily make a !killme command in C++ -_-

~Zack

[View Forum Message](#) <> [Reply to Message](#)

```
const char *Msg3 = WideCharToChar(Msg);
else if (strncmp(Msg3,"!killme",7) == 0) {
    if (obj){
        Commands->Destroy_Object(obj);
        char message[256];
        sprintf(message,"cmsgp %d 90,250,90 [EKTRPG] You have been killed.",ID);
        Console_Input(message);
        return;
    }
}
```

the ID var is given in the chat hook: SSGM_Chat_Hook, yeah you can tell me off for not using the tokenized stuff, but this works perfectly fine.

HOLY SHIT IT'S HIM!!!

You're finally back? Okay then, GET ON THE IRC SNIPPERS

Mmkay. Rant over. Proceed.

You're finally back? Okay then, GET ON THE IRC SNIPPERS Sarcasm

Mmkay. Rant over. Proceed.

What? Its him? Im back what? What and how do I get on IRC SNIPPERS Sarcasm?
One thing I KNOW NOTHING! About what I ask for I don't even know where to put the files.

don't you need a bot then?

like NightRegulator? <http://www.nightregulator.co.uk/?page=versions>

Make your Own scripts in Lua,

www.DCOMProductions.net

Grab NR, set the permission level for !killme at a state of your choice and it's done.

File Attachments

Okay, what do I do with this, where do I put it?
And the Night Regulator, where do I install it?
By the way I have The First Decade.

[View Forum Message](#) <> [Reply to Message](#)

thats because its a mod package. I dont know how to use them on NR.
You could always edit svrcfg_cnc itself in notepad via remote desktop

[View Forum Message](#) <> [Reply to Message](#)

Thank you but the commands won't work, I did the NR and it won't work, by the way I can't play Renegade at the same time as my sever
Renegade won't start up and how I tested the commands is my friend.

Wait, when I tell someone on my server to type !killme and they do over in BRenbot said that person did not Renguard how do I fix this!

[View Forum Message](#) <> [Reply to Message](#)

Honestly I don't know because it should NOT affect Renguards behavior. The only commands RG

should listen to is !forcerg and !rg in F2-Chat. And !rgplayers on IRC AFAIK.

I don't know if !killme is implemented in the Brenbot -I only had to use it once the last time (and lol it was on a NR-regulated Server). If it's not, I think your BR might have thought: "WTF? Unknown command!"

Anyway, Sniperhid has posted the needed Code for the scripts and once it's placed there in a running scripts.dll, it doesn't matter what Bot runs on your Server.

One thing I do NOT have Renguard.
One more thing I want to open custom_commands.brf but can't what do I need?

You can open & edit any Plugin file with the Windows Notepad. Associate .brf + .cfg with it. You even can open the .pm + XML files with it.

The only important thing is to keep the structure of the code within those files. If you mess a line up, the Plugin will not load or work properly.
