Hey guys..

I'm trying to set up my own little server for me and some buddies..

I have the latest BRenBot installed, got that all working.

I have FDS installed, and I had that working perfectly fine until I got the new BRenBot, which also installed the BIATCH software.. Now, when I try and start up FDS (Renegade server on WOL), I get a message saying: FATAL ERROR: Can not write to ./log/biatch/main.txt

Anyone know how to solve this, or - does anybody know how to totally get rid of the BIATCH software? I tried removing biatch.dll but then the FDS can't find that.. I'm in a pretty large mixup here..

Anyone know how to solve any of this?

heya Morphine

The best way to fix this..

go into your FDS directory (C:\Westwood\RenegadeFDS\Server\) and create a new directory called log

Inside log, create a new directory called biatch

Inside that, create a text file called main.txt

After that, start yer FDS, it should be good to go.

C'ya on J2
