yeah i got that stuff and i tried yours too i just can't do anything with it just move it...

you convert it into editable mesh and it's all gray so you chose mesh select from the modifier list and once you press something (vertex/edge/polygon...) all move/scale... buttons turn gray

On the top of the menu bar click on "Group" then scroll down to "Ungroup" and click it. This will detach all of the pieces on the ob so you can edit them. Just make sure that when you are done to select all meshes and select "Group".
