Hello,

I finally got my really first ever gaming rig with a decent video card too! And I am getting high-speed internet connection too.

Naturally, I am VERY EXCITED as so far, I have been playing Renegade on my crappy laggy Dell Latitude C640 laptop on low detail settings.

Well, those days are over. But I don't want to uninstall Renegade from the laptop as I do take it to college to play from if I have time.

I think there should be no problem in installing and using the same game serial from the laptop AND the desktop no?

I will be using CP2/RG with No-CD crack on the desktop.

Thanks.

No problem, xwis doesn't check how often a serial is logged in.
