The only person "known" to have an easily controllable Renegade client "bot" is SK, and I doubt he'd use it for that.

I think he means like if it is possible to make a bot that will join a server which is not possible.

would be a great idea though... have AI that will follow you all game and repair you.

i remember MP servers had AI bots just sitting there at certain spots on maps like mesa and repairing anyone that would walk by... but they would not follow you just point at you with their rapir gun and if you get close enough you get free repairs

You guys still don't seem to understand, he does not want a bot ingame, he is wondering if it is possible to make a bot that can join any server of choice like any person would normally, which is not possible.

It's possible and not too hard. I don't see why you would want to though.

Yeah but if it were possible it'd be kinda fun lol. Instant army of bots rush. Too bad they don't attack structures well.

What link?
