Ive been to those servers where they have like laser walls and big crates inserted into the map.

I know that i could use LE to do this, or use a spawning command.

either way, i need to know the preset names for the laser wall and the crate, so if anyone knows em, could you let me know?

also id like to know the preset name for the sam site.

thank yous!

Just scroll down to the "Server side" section and should be plenty to get you rolling
