When i try to update my Ranks with the PHP scripts i get this error:

Incorrect integer value: " for column 'nodharv' at row 1

It doesn't give the error after a fresh install of the plugin. Only when a game has been played after install.

Anyone who has an idea??

Besides that i got 2 questions:

In witch plugin is the !FDS command integrated???

and

Is there a plugin to give a message ingame if someone joins on IRC?

The !FDS command is a core command in BR 1.50 and above, so as long as you have it turned on in commands.xml it will work.

And no, there is currently no plugin to give an ingame message when someone joins IRC.

Hex coded the PHP scripts, so I can't say what the problem is there. He will probably look in sometime and answer though.
