You can try it this way=

-Start BR

-navigate to the system TEMP dir on the machine the BR is running on

-look for a folder called par-<username> Username is your user name from the current user account running in windows. On Linux it could be similar to this.

-search the dir for the file brenbot.pl

-goto line 343 and replace the words to "Server Administrator" or whatever you like

-in the second brenbot.pl it's the same procedure

-there is a third .pl in which you have to change the value. It's inside the cache-xyz dir where the extracted brenbot.exe is. Also line 343 changing here

Restart BR and watch if it works.
