I have recently reinstalled renegade on my computer and couldn't remember my password. I searched these forums and found out how to reset my password. When I typed "reset passwords" into the chat it came with the green text saying that I had reset my passwords. However now i'm confused what has my password been reset to?

The new password should have come up in a popup. But this might be easier:

- * Download XWISC: <http://xwis.net/downloads/XWISC.exe>
- * Your nicknames registered to your serial can be reset by hitting on 'Test'
- * Select the 'Reset Password' box
- * Hit 'Ok'
- * Some text will now appear in the box below, with your new password alongside each or your nicknames

Obviously this will only work with nicknames on your own serial.

A pop-up oh, well I tried it again and this time it did. Thankyou very much
