Playing as Team Mutant

Someone told me, that it is only possible to access Mutant Purchase Terminals as GDI - and he was right. Below is a screeny of an activated Mutant PT in its basic condition.

The mutant character button activates a shell that is different from gdi.

If you access as Nod, the games crashes.

But that means, the Mutant PT is not an empty shell, there is source code for this, which must only be expanded to cover nod.

With that - and with a nice mutant icon, it should be possible to have mutants as team available??? Would be a great deal together with the working Mutant Lab / Science Facility.

Can some guys with coding skills proof that?

---

Indeed, it does work. I don't see much use for it in its current state, though.

As far as I remeber, Reborn's server-side-Hunt-The-Player is based on Team Mutant2. However your score is not recorded as the engine doesn't see it as a team.  
Also, if it is a mod you are using this for, you can easily change the team purchase settings to allow the purchase of Mutants.

Nice find, hope to find a good use for it.

The PT was just originally intended to allow GDI and Nod teams to purchase mutant characters from another PT somewhere on the map. However, I think they only coded it halfway for GDI and then stopped for some reason.

Is it fixable? By someone with machine code skills?

\*Big Image here\*

ya i can confirm it too it does work i can't export mix for some reason so i had to change presets but it does work great find rrutk.

I have something in mind with the mutant pt...

It looks like when i want to ask something you allways do it before me

yes, i think, it should be definitely worth some effort on working out the thing.

would be nice playing with either 3 teams ore the possibility to buy at the science lab gdi or nod mutants.

if it is possible to change complete PT logic with scripts, it should also be possible to set up the mutant thing.

but the missing nod code needs to filled in.

i think it has something to do with that message (you don't have right to acces pt) or something similar

Renegade only looks at GDI and NOD as teams. Everything else is random or neutral. So without some heavy assembler coding the third side will not be useable.
