After an afternoon of puzzeling with Supreme Commander, I managed to convert a Cybran Tank to W3D.

I'm pretty happy with how it turned out, considering this tank was originally designed to be seen from above in a rts game.

So far so good, I soon realised that I'm too unexperienced in the process of boning/rigging.

So I humbly ask, who can, and wants to?

In return, public model.

I know how and I would but I can never get the bone orientation correct. Sorry

EDIT: The tank has the triforme on top! TA/SC hails Zelda!

Thanks for that. But at the moment me and someone else are trying to make it look better from up close. By default it's only 270 polygons. I will keep you informed if it ever get's done.

I can

sorry to say this doomkid, but the last few times youve attempted to bone a vehicles, all you did was copy the bones off a standard ren vehicle, which doesnt exactly leave me confident in your ability to do this. I would volunteer, but I've never boned a tank, and don't have the patience to try. VTOL's are more my thing.

That's a Rhino tank.

Yes, but this is the Rhino tank from Supreme Commander. But I agreed that the RA2 Rhino Tank is THE Rhino tank.
