Hello,

I'm hosting a server with Brenbot 1.52 Build 1

and I have some problems with it.

- 1.If somebody joins it says they don't run renguard (temp fixed)
- 2.If my buddy joins he gets the sound that he's connected to renguard on my server but then if i join with renguard it says i don't use it.

Please help me

oops can somebody please move this topic

Are you on the same network as the server is. You won't be recognised as using renguard if you're on the same ip as the server.

Well

my server uses a 84 ip  
and me a 192 ip

The 192 is an internal ip adress. So this confirms that you are on the same network, hence have the same external ip adress.

ah,

and yes i use a router,

but i entered te 192 ip (the one i get when i join my FDS)  
into the DMZ and i turned my firewall off

(how do i add myself into exeption list of Brenbot(renguard))

Ty
