Hey, I'm having problems running Renguard. I installed the patcher, the core patches and when I try to patch it says old file error. Also, I have updated with the 1037 patch.

Did you do it in the right order, as described here?

It might be that u need to manually download the core patches, as explained in above link as well.

All right, I followed the steps, and reinstalled everything, still not working. It keeps saying in every instance of updating/patching missing old file. I have Vista by the way.

Normally if it says old file not found, it means you didn't install patch 1.037 (at the right moment).

You could also try manually downloading core patch 2 if the renguard installer doesn't work.
