Ok so i just installed renegade on my new laptop. it has vista and can run pretty much any game but when i put in renegade to play it brings up a starting up picture like its going to work but then it comes up with a message that says that renegade stoped working unexpedly. Can anyone help me out with this problem??

Usually Renegade does not run under Vista.
Try the XP compatibility mode or install Renegade Resurrection.

You tried which of those two? Xp Compatibility mode? (If you tried XP Compat, also try running it in "admin mode")

If you installed Renegade Resurrection, wait for Yrr to reply.

If you installed RR and it still crashes, was there a folder named 'debug' created?

Details on how to do it here

If you haven't installed Renguard, then the instructions are for "game.exe" are still relevant.
