The IPDB plugin for BRenBot has been updated to fully support changes to the IPDB server, it is recommended that you update your plugin via brloader or by manually downloading it from <http://new.brenbot.com> to take full advantage of the latest updates to the IPDB server.

For more information about the updates check the following topics;
IPDB Server Update 1.32
BRenBot IPDB plugin update 1.132

This update has been out for 1 month now, which is more than sufficient time for people to update their plugins. For this reason the server has been updated again to terminate idle connections after 10 minutes, as opposed to 1 hour. If you have NOT updated your plugin it is highly recommended that you do so, or BRenBot will be disconnected from the IPDB server every 10 minutes if there are no players in the server.

IPDB Server Update 1.321

I updated my plugin to the latest version. I was getting confused with all the version numbers until I understood that you are referring to the server and plugin versions separately.
