I know the W3D importer has 101 bugs that are normally by-passable by fiddling with the import options.
Today I tried to import dsp_shipradar.w3d as I wanted to strip it of the "destroyed look" frames and so use it as an object rather than a tile after exporting. Unfortunately I couldn't import it. The first try, I received this (attached) text file. After fiddling with the import frames options I instead got a general application fault while importing.
Anyone know if I have do do something else to be able to import this particular W3D?
