Ok after 12 hours of work heres the xm8 autorifle replacement enjoy

<http://www.fileden.com/files/2007/5/25/1111692/xm8ingame.png>  
Xm8 animations + textures + sounds  
<http://www.fileden.com/files/2007/5/25/1111692/xm8.zip>  
+ heat trail bullets

Very nice job, but as said, texture could use some improving. If I had photoshop I'd take a crack at it, but sadly I don't. Also, I suck with anything art related .

But still, glad to see you're still making weapons. HOORAY FOR URIMAS!

Added to Game-Maps.NET with two download options, .exe format and .zip format, the latter also includes the gmax file.

<http://www.game-maps.net/index.php?action=file&id=1195>

well id prefer the gmax file not included as i dont want just anyone editing it i only added it here so someone can try to skin it.

and im not back for good due to the fact i dont realy like renegade anymore due to its c\*\*p damage system. but i like to still do models.

The bullet tracer looks cool but is it allowed?

And great work Urimas!

And great work Urimas!

Depends on the server.

I remove the gmax file later today.

You can't see your bullets if your shooting in an orca/apache....kind of a drawback. Maybe my settings are too low though. Any one else notice this?

There's a very good reason why there are no bullet trailers in Renegade. Stop cheating, plz, tx.

...Thimma Bullets show your gunfire. Take a look at pimpmyren skin pack and you will see what I mean. It adds a colored tracer, have a look.

OMFG.. nice but the texture not so good maybe try to make it black?

and if you could give me the gmax file i could try to make a better skin

P.S: Try to model it in Google Sketch up really easy to use and then export as 3ds and import to gmax!
