The switch for the gate doesn't seem to work. I go to the switch and it has those green down arrows, then I press E and nothing happens. Which means, I can't get the mammuth inside and the tesla cannon kills me everytime I try to get around it.HELP!

Is the "E" your action key? I know that I had to press it several times, walk away, go back to the gate and press it again before the gate would open. Watch out though, as soon as the gate opens you get bombarded with bad guys coming at you!
