By "tdonate" are you wanting to donate money to a team or just an individual player?

Subject: Re: !tdonate

Posted by [marcin205](#) on Tue, 08 Jul 2008 19:57:34 GMT

[View Forum Message](#) <> [Reply to Message](#)

to individual player like !tdonate 3000 and all players have some parts of this credits

I'm using the chathook and a tokenizer.

Or what is your question?

Subject: Re: !tdonate

I think they want a !tdonate command made for them which really I can't see happening, use Brenbot it has a !tdonate command.

[View Forum Message](#) <> [Reply to Message](#)

Am I right in understanding you want a player to be able to donate a certain amount of hos money to the entire team?

So he might say !tdonate 400, and the four players on his team each get 100 credits?

Subject: Re: !tdonate

Try this out then, I havn't tested it, so if you could and report any bugs that would be nice, as I plan to use it myself too.

```
class tdonateChatCommand : public ChatCommandClass {
void Triggered(int ID,const TokenClass &Text,int ChatType) {
GameObject *obj = Get_GameObj(ID);
if (!Text[1].empty()) {
float money = atof(Text[1].c_str());

/*const char* s_money = Text[1].c_str();
sscanf(s_money,"%f",&money);
if (sscanf(s_money,"%f",&money) != 1)
{
Console_Output("There was blood, everywhere. Nobody could tell what did this to them, but
there was one thing for certain. Something had gone horribly wrong.");
}
*/
```

```

float clientsmoney = Commands->Get_Money(obj);

if(clientsmoney >= money){
int Team = Get_Team(ID);
int count = Get_Team_Player_Count(Team);
if(count > 1){
int amounttodonate = money/(count - 1);
Commands->Give_Money(obj,(money * -1),false);
GenericSLNode *x = BaseGameObjList->HeadNode;
while (x){
GameObject *o = (GameObject *)x->NodeData;
if (o && Commands->Is_A_Star(o) && (Commands->Get_Player_Type(o) == Team)){
if(Get_Player_ID(o) != ID){
Commands->Give_Money(o,amounttodonate,false);
Console_Input(StrFormat("ppage %d You have just been donated $%i by player
%s.",Get_Player_ID(o),amounttodonate,Get_Player_Name(obj)).c_str());
}
}
x = x->NodeNext;
}
}
else{
Console_Input(StrFormat("ppage %d Dude, you're the only player on your team :-S",ID).c_str());
}
}
else{
Console_Input(StrFormat("ppage %d You do not have $%i, please lower your
donation.",ID,money).c_str());
}
}
};
ChatCommandRegistrant<tdonateChatCommand>
tdonateChatCommandReg("!tdonate",CHATTYYPE_ALL,1,GAMEMODE_ALL);

```

There's probably some casts I havn't done that I should of, but I'm a lazy bitch and keep my warning levels down all the time.

You're probably able to make it say some weird numbers if you type !tdonate 34098563406854968409680954870986504, but it shouldn't actually do any harm.

Feel free anyone to pop there two cents in and make it better

Oh, I also found a flaw with int Get_Team_Player_Count(int Team), so you'll need to change that function to read like this:

```
int Get_Team_Player_Count(int Team)
{
int Total = 0;
GenericSLNode *x = BaseGameObjList->HeadNode;
while (x)
{
GameObject *o = (GameObject *)x->NodeData;
if (o && Commands->Is_A_Star(o))
{
if (Get_Team(Get_Player_ID(o)) == Team)
{
Total++;
}
}
}
x = x->NodeNext;
}
return Total;
}
```

He writes the stuff himself, rather than looking though other peoples soruce and calling it their own.

Subject: Re: ltdonate
Posted by [reborn](#) on Wed, 09 Jul 2008 16:54:55 GMT
[View Forum Message](#) <> [Reply to Message](#)

Actually if I'm honest I do look at other peoples code. I recycled allot of vloktboky's code from previous releases into other work. Granted I didn't copy it line for line, but there are allot of similarities here and there in hunt the player mode and the base defense plug-in and that of boky's deathmatch mode and other releases.

I didn't know or had never tried to convert a const char * type to float until today, I asked both Stealth Eye and Saber Hawk and they kindly replied. I ended up using Stealth Eye's suggestion and took a look at atof, which ended up forming this line "float money = atof(Text[1].c_str());".

Asking people for help is not a bad thing. Some people are embarrassed to do so, or don't want to annoy people. If someone asks me and I know then I will help them, unless they are an asshole. If I'm busy then I will say I'm busy.. I have found this works with others. I ask Roshambo, WD, SaberHawk and StealthEye for help all the time. Sometimes I even manage to get-a-hold of boky...

If you're ego is so large that you cannot ask someone for help then you're not going to get very far at all in life. It's easier for me, I practice meditation and actively try to free myself from ego, but I can see why others have a hard time.

But yes, you're right. Copying other peoples code line for line and then calling it your own, or just changing a little thing here or there is pretty lame.

[View Forum Message](#) <> [Reply to Message](#)

Give credit where credit is due, but don't be loathe to ask others for help. I've had to head to the #c++ channel on Freenode quite a few times because I have had questions about C++ itself as well as asking StealthEye or Ghostshaw for help, RoShamBo and Saberhawk are good resources too.

BTW: get a good C++ book. I have heard very good things about Koenig's "Accelerated C++" as a starting point. Once you work through that, you should be ready for Stroustrup's "The C++ Programming Language, 3rd edition". Don't try to learn C++ from the scripts...because they have some very ugly, poorly-encapsulated code and lots of reinvented wheels.

You'll need visualstudio.net2005, there is a thread on setting it up here:
<http://www.renegadeforums.com/index.php?t=msg&th=26642&start=0&rid=3> 415

You will also need the source code to SSGM 2.02, which you can get here:
<http://black-cell.net/downloads/index.php?act=view&id=30>

You'll need to open the .sln file in the source code folder of SSGM (once it's un-zipped), this will open up all the .cpp and .h files in one go, you'll be able to see them all in the left hand side solution explorer window.

Open up gmmain.cpp by navigating to it in the solution explorer window like this:

And then double click it. That will then open it up in your main window then...
Scroll down in this window until you see this come up:

```
//*****  
//***** CHAT COMMANDS *****  
//*****
```

That's where you then copy and paste in the chat command for tdonate.

Unfortunately the chat command relies on the team player count function, which I found was bugged out. So you'll now need to open the file in your solution explorer called engine_player.cpp, this file is in the folder in your solution explorer called scripts source files. Scroll down until you see this "int Get_Team_Player_Count(int Team)", and then replace it with the one I posted above. You need to save both these files now, you can do this with "control S" when you're in the main page for each .cpp file, but it's probably better for you to go to "file" in the top left hand corner, and then hitting "Save All".

Now you need to compile this solution, just go up to "Build" on the tool bar and then "build solution", or you could hit your f7 button (there's like a million ways to do everything in visualstudio).

This might take a little while depending on your computer speed, and it always takes a while the first time anyway. Assuming you've done it right and there are no errors, it will produce a scripts.dll file in your source code folder. This is then the file you should use to replace the existing one on your server.

Any problems then post back
